

SANYFOG®

Sanitization
for everyone

The current health emergency has shown that a disease can spread through contact with different materials, thus making them potential sources of contamination. Personal hygiene is certainly the first defense against infection, but environmental hygiene is equally important. Although of fundamental importance, accurate cleansing may be not enough. In fact, many everyday objects present areas that are hard to reach with manual cleaning operations alone and it can be difficult to sanitize clothes while worn.

SANYFOG device produces a dry fog through sanitization for saturation, transforming the sanitizing solution into 1 to 5 μm -diameter particles, without wetting the surfaces. These enable the product to reach the entire surface areas to be cleaned while remaining suspended in the air for only a minimum time, compared with other aerosol systems.

SANYFOG HAS DIFFERENT APPLICATION FIELDS LIKE PUBLIC AREAS, OFFICES, HOSPITALS, INDUSTRIAL BUILDINGS, GYMS, HOTELS, RESTAURANTS AND MORE.

SANYFOG 06-I

floor area $\leq 150 \text{ m}^2$

SANYFOG 18-I

floor area $> 150 \text{ m}^2$

the advantages of SANYFOG®

operating times: 20m² in 4 minutes to eliminate COVID-19, bacterial and viral load

high efficiency thanks to time and consumption optimization

no wet

high energy-saving

high quality components

The are two models currently available on the market which are the result of a complete restyling, in terms of both sturdiness and electronics, of the very first device manufactured in March, 2020

main technical features of SANYFOG®

- Automatic feeding of the sanitizing product directly from the tank
- Program-controlled start via comfortable touch screen
- Noiseless atomization
- Sound alert when the product runs out
- Automatic shutdown when the product runs out
- Structure in 304 stainless steel

LOCAL AND CULTURAL EVENTS

with the installation of inflatable tunnel, it is possible to sanitize every participant in the event. The fog produced by SANYFOG sanitizes people without getting them wet.

HIGH-TRAFFIC AREAS

with the installation of a booth, it is possible to sanitize every participant in the event. The fog produced by SANYFOG sanitizes people without getting them wet.

With both versions of these tunnels it is possible to monitor the number of people accessing and exiting the event
